NRC TO DISCUSS 2008 PERFORMANCE ASSESSMENT FOR QUAD CITIES NUCLEAR POWER PLANT UNIT 1 AND 2

The Nuclear Regulatory Commission staff will meet with representatives of Exelon Generation Co. Tuesday, April 7, to discuss the agency's assessment of safety performance for last year at the Quad Cities Nuclear Power Plant. The plant has two reactor units in Cordova, Ill.

The meeting, which will be open to the public, is scheduled to begin at 6:00 p.m. CDT at the Best Western Steeplegate Inn, Symposium Room, 100 West 76th Street, Davenport, Iowa. The NRC staff will present the results of the assessment, talk about the NRC and its range of activities, and be available to respond to questions or comments from the public before the close of the meeting.

"The NRC continually reviews the performance of the Quad Cities plant and the nation's other commercial nuclear power facilities," said NRC Region III Administrator Mark Satorius. "This meeting allows us to discuss our annual assessment of safety performance with the company and members of the local community. The goal of this meeting is to explain how the NRC works and make sure as much information as possible is available on the NRC's regulation of nuclear power plants."

A letter sent from the NRC Region III Office to plant officials addresses the performance of the plant during the period and will serve as the basis for the meeting discussion. It is available on the NRC web site at:

http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/LETTERS/quad_2008q4.pdf.

The NRC uses color-coded inspection findings and performance indicators to assess nuclear plant performance. The colors start with "green" and then increase to "white," "yellow" or "red," commensurate with the safety significance of the issues involved.

Overall, Quad Cities operated safely during 2008. At the conclusion of last year, as assessed by the NRC Reactor Oversight Process, there were no performance indicators for the plant that were other than “green” and no inspection findings that were “greater than green.” Therefore, for the rest of 2009, Quad Cities will receive the very detailed inspection regime used by the NRC for plants that are operating well.

Routine inspections are performed by two NRC resident inspectors assigned to the plant and by inspection specialists from the Region III Office in Lisle, Ill. Among the areas of plant operations to be inspected this year by NRC specialists are radiation protection, fire protection, and licensed operator requalification program evaluation.

Current performance information for Quad cities is available on the NRC’s web site at: http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/QUAD1/quad1_chart.html (Unit 1) and http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/QUAD2/quad2_chart.html (Unit 2).
